DETAILED ACTION

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Allowable Subject Matter

2. Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding independent claim 1, the prior art fails to disclose or make obvious an apparatus for producing an electron beam comprising a vacuum chamber comprising:

- a superconducting, single walled metallic-type carbon nanotube comprised of a cylindrical wall and
- an electron beam emitting tip comprising a second carbon nanotube disposed within said superconducting single walled metallic-type carbon nanotube, said second carbon nanotube having an inner surface with a thin conductive coating.

Claims 2-12 are allowed by virtue of their dependency on claim 1.

Regarding independent claim 12, the prior art fails to disclose or make obvious a scanning electron microscope comprising an enclosed point source electron beam generator disposed within a conically tapered enclosure having an end comprising a conical pipette tip target opening.

Claims 13-20 are allowed by virtue of their dependency on claim 12.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"

Relevant Prior Art

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Ren et al. (US 2003/0143453) discuss methods for obtaining carbon nanotube electrode materials having a uniform surface coating of an electrically conductive polymer.

Kruit (USPN 5587568) discloses an electron point source comprising an atomic point source emitting electrode disposed within a small vacuum chamber. Neither the chamber nor the electron source comprises a carbon nanotube.
